

## **SELF-SUPPORTING PANEL ASSEMBLY**

Self-supporting panels are to be mounted to the hardware thru the slotted holes in your mounting plate or mounting bracket(s) depending on the type of hardware purchased. Mounting hardware is supplied by your panel manufacturer. Our slotted holes with accommodate up to 1/4" hardware. Mounting height from ground level to the bottom edge of the panel is typically 28" to 32".

Attach your panel to the hardware per the panel manufactures instructions. Make sure the panel is securely held to each post. Continue attaching your panel to any additional posts, having someone support the previously attached posts and panel while attaching subsequent posts. Place the posts in the ground according to your area's requirements.
